## SAFETY CERTIFICATIONS

This helmet model meets or exceeds both ECE 22.05 and DOT FMVSS-218 motorcycle helmet safety standards.

## HELMET WEIGHT

A large-size FX-39DS weighs 1.59 kg or 3.5 lbs

## SPECIFICATIONS & FEATURES

- An aerodynamic shell design constructed using an advanced lightweight composite poly-alloy
- A flip-up, flush-fit, quick-release, single-turn screw face shield with side covers. The shield itself is optically correct, compound-curved, scratch-resistant and protects against UV-rays
- There are several tinted shields available for this model
- Shield can be removed to allow open face riding or goggle use

- A helmet liner and cheek pads made with a hypo-allergenic and anti-microbial nylon, all of which are removable and washable
- 9 points of ventilation with chin, side, forehead, top and rear vents
- Retention system is quick release with sewn on ECE logo
- Provides ample ear cavity space for speakers
- A clear coat finish to protect paint & graphics

This helmet model meets or exceeds both ECE 22.05 and DOT FMVSS-218 motorcycle helmet safety standards.

## HELMET WEIGHT

A large FX-55 with shield, visor and chin bar attached weighs 1.68 kg or 3.69 lbs.

## SPECIFICATIONS & FEATURES

- An aerodynamic shell design constructed using an advanced lightweight composite poly-alloy.
- Helmet can be configured one of seven different ways. Ships with all 7 parts included
- 1. Helmet with standard visor, shield, and chin bar (standard configuration)
- 2. Helmet with standard visor and shield
- 3. Helmet with shield and chin bar
- 4. Helmet with shield
- 5. Helmet with standard visor
- 6. Helmet with short visor
- 7. Helmet with mx vent chin bar and standard visor
- A flip-up, flush fit, quick release, single turn screw face shield. The shield itself is optically correct compound curved,

- scratch-resistant and protects against UV-rays
- Smoke tinted inner flip down sun shield system with left side slide lever.
- A helmet liner and cheek pads made with a hypoallergenic and antimicrobial nylon, all of which are removable and washable.
- 10 points of ventilation with chin, side, forehead top and rear vents
- Retention system is quick release with sewn on ECE logo.
- Provides ample ear cavity space for most speaker systems
- A clear coat finish to protect paint & graphics

# SAFETY & SIZE CHART

## WHEN TO REPLACE A HELMET

The expected lifespan of any helmet is 4-5 years of seasonal use, and decreases accordingly as the frequency of use increases. As you would expect, helmets used for competition such as road racing and motocross tend to have a much shorter life span. The more exposure a helmet endures to the elements, body oils, and perspiration, the faster it will wear out. In most cases the helmet liner will be the first component to wear out and, as such, functions as a good indicator that a helmet should be replaced.

We at AFX recommend that any helmet suffering a significant impact to the shell be removed from use immediately, whether there is visible physical damage or not. A helmet is designed to deform in an accident in order to absorb the energy of the impact, and should never be reused afterwards for its ability to protect the rider further could be compromised.

## HELMET FITTING GUIDE

### 1 | MEASURE YOUR HEAD

Determine the circumference of the widest part of your head by using a flexible tape measure. Generally, the widest part of a person's head is the area 2.5cm (1") above the eyes and ears. However, we suggest measuring at a few points both above and below that line to determine the greatest measurement before referring to our size tables. We also suggest testing the fit of a helmet one size smaller and one size larger than what the chart recommends. No helmet can provide protection if it's too uncomfortable to wear.

### 2 | TRY WEARING THE HELMET

Helmets must fit snugly, but not painfully tight. While holding the chinstraps outside of the helmet, pull it down over your head, taking care that the chinstraps do not go up inside the helmet. A proper-fitting helmet will feel snug with fairly even pressure around the sides and top of your head. On most modern helmets the liner is designed to be a little extra snug at first, but will break-in after several hours of riding to match the particular shape of your head.

If you are not familiar with how a helmet should fit and feel, be sure to ask for assistance from a salesperson or a more experienced rider. As a rule, the helmet should not be able to move around on your head without pulling on your skin. A loose fitting helmet is not only dangerous, but may also be noisy and tiring to wear. Most people make the mistake of buying a helmet that's too large. **IMPORTANT:** Make sure that you fasten the chinstrap securely beneath your chin when trying-on a helmet and then test to see that the helmet cannot be removed from your head when fastened in that manner.

### 3 | MAKE THE RIGHT DECISION

Most retail stores will not exchange purchased helmets if they've been worn for any length of time, so take your time, and wear the helmet inside the store for several minutes. Not every brand of helmet can fit every head size and shape. If you find that you just can't get a comfortably snug fit in our helmets we suggest you try a different brand. Helmets can't provide protection if they never get worn.

### SAFETY REMINDER

No helmet can protect the wearer against all possible or foreseeable impacts. A helmet can only protect the portion of the head that is covered by the helmet. For maximum protection, the helmet must be well fitted with the chinstrap securely fastened. Failure to follow these instructions, the instructions printed on the helmet, and those contained in the owner's manual may result in the possibility of the helmet coming off during an accident - possibly resulting in a severe head injury or even death. While riding motorcycles, scooters, ATVs and snowmobiles is fun, it can also be a dangerous pastime. At AFX, we encourage you to enjoy riding responsibly, and to always ride within the limits of your abilities.
