AFX LIGHTFORCE helmets are the world's first, and only, motorcycle, off-road, and snowmobile helmets built with an integrated, rechargeable power system. In the FX-11, this system powers miniature fans located in the helmet's chinbar that help keep your faceshield fog-free while continually circulating cool, fresh air around the helmet's interior. The FX-11 also features an ultra bright LED light which can be used for convenient night-time utility, or in situations where high visibility is desirable. Please consult our website for more information regarding this exciting new technology.

AFX LIGHTFORCE helmets are the world's first, and only, motorcycle, off-road, and snowmobile helmets built with an integrated, rechargeable power system. In the FX-4LF, this system powers miniature fans located in the helmet's chinbar that help keep your faceshield fog-free while continually circulating cool, fresh air around the helmet's interior. The FX-4LF also features an ultra bright LED light which can be used for convenient night-time utility, or in situations where high visibility is desirable. Please consult our website for more information regarding this exciting new technology.

HELMET FITTING CHART

We at AFX believe that for any helmet to protect the user properly, it must fit correctly. As a result, we have gone to great lengths to create some of the best-fitting helmets available on the market. To find the right helmet for you, have your head's circumference measured one-inch above the eyebrows and ears, and then use this chart to find the corresponding AFX helmet size. Please note that hat sizes are for reference only, and should not be used exclusively when deciding on a helmet size. A more detailed guide on helmet fitting exists in the resources section of our website [www.afxhelmets.com].
