FX-11 LIGHTFORCE AT NIGHT

INTEGRATED LED LIGHT

AFX LIGHTFORCE SYSTEM

AFX helmets equipped with our LightForce system are the world's first, and only, motorcycle and snowmobile helmets built with an integrated and rechargeable power system.

In both the **FX-4** and **FX-11**, the system powers an ultra-bright LED light which can be used for convenient night-time utility (such as reading a map).

INTEGRATED FANS

In the **FX-11**, this system also provides miniature fans located in the helmet's chin bar that help keep your face shield fog-free while continually circulating cool, fresh air around the helmet's interior.

Please consult our website for more information regarding this exciting new technology. > www.afxhelmets.com

HELMET FITTING GUIDE

We at AFX believe that for a helmet to protect the user properly, it must fit correctly. To find the right helmet for you, determine the circumference of the widest part of your head by using a flexible tape measure. Generally, the widest part of a person's head is the area 2.5cm (1") above the eyes and ears. However, we suggest measuring a few spots above and below that area to determine the greatest measurement before referring to our size tables.

Please note that hat sizes are for reference purposes only, and should not be used exclusively when deciding a proper helmet size. We also suggest testing the fit of a helmet one size smaller and one size larger than what the chart recommends. No helmet can provide protection if it's too uncomfortable to wear!
