WARRANTY & SIZE CHART

AFX HELMET WARRANTY POLICY

We at AFX believe in the quality of our products and the care that goes into their manufacture. Our Lifetime Limited Warranty program applies to every helmet we sell, in every market, and protects owners against defects and the premature wear of helmet components during the projected life expectancy of the product (5 years from the date of purchase). The warranty does not cover matters beyond our control such as normal wear and tear, or damage incurred through accident or abuse. Please note that any damage caused by the consumer, (i.e. dropping the helmet), etc., is not covered under warranty. Owners wishing to make a warranty claim are directed to contact AFX through our website WWW.AFXHELMETS.COM to commence the process.

WHEN TO REPLACE A HELMET

The expected lifespan of any helmet is 4-5 years of seasonal use, and decreases accordingly as the frequency of use increases. As you would expect, helmets used for competition such as road racing and motocross tend to have a much shorter life span. The more exposure a helmet endures to the elements, body oils, and perspiration, the faster it will wear out. In most cases the helmet liner will be the first component to wear out and, as such, functions as a good indicator that a helmet should be replaced.

We at AFX recommend that any helmet suffering a significant impact to the shell be removed from use immediately, whether there is visible physical damage or not. A helmet is designed to deform in an accident in order to absorb the energy of the impact, and should never be reused afterwards for its ability to protect the rider further could be compromised.

HELMET FITTING GUIDE

1 | MEASURE YOUR HEAD

Determine the circumference of the widest part of your head by using a flexible tape measure. Generally, the widest part of a person's head is the area 2.5cm (1") above the eyes and ears. However, we suggest measuring at a few points both above and below that line to determine the greatest measurement before referring to our size tables. We also suggest testing the fit of a helmet one size smaller and one size larger than what the chart recommends. No helmet can provide protection if it's too uncomfortable to wear.

2 | TRY WEARING THE HELMET

Helmets must fit snugly, but not painfully tight. While holding the chinstraps outside of the helmet, pull it down over your head, taking care that the chinstraps do not go up inside the helmet. A proper-fitting helmet will feel snug with fairly even pressure around the sides and top of your head. On most modern helmets the liner is designed to be a little extra snug at first, but will break-in after several hours of riding to match the particular shape of your head.

If you are not familiar with how a helmet should fit and feel, be sure to ask for assistance from a salesperson or a more experienced rider. As a rule, the helmet should not be able to move around on your head without pulling on your skin. A loose fitting helmet is not only dangerous, but may also be noisy and tiring to wear. Most people make the mistake of buying a helmet that's too large. **IMPORTANT:** Make sure that you fasten the chinstrap securely beneath your chin when trying-on a helmet and then test to see that the helmet cannot be removed from your head when fastened in that manner.

3 | MAKE THE RIGHT DECISION

Most retail stores will not exchange purchased helmets if they've been worn for any length of time, so take your time, and wear the helmet inside the store for several minutes. Not every brand of helmet can fit every head size and shape. If you find that you just can't get a comfortably snug fit in our helmets we suggest you try a different brand. Helmets can't provide protection if they never get worn.

SAFETY REMINDER

No helmet can protect the wearer against all possible or foreseeable impacts. A helmet can only protect the portion of the head that is covered by the helmet. For maximum protection, the helmet must be well fitted with the chinstrap securely fastened. Failure to follow these instructions, the instructions printed on the helmet, and those contained in the owner's manual may result in the possibility of the helmet coming off during an accident - possibly resulting in a severe head injury or even death. While riding motorcycles, scooters, ATVs and snowmobiles is fun, it can also be a dangerous pastime. At AFX, we encourage you to enjoy riding responsibly, and to always ride within the limits of your abilities.
